

PRO SCRUBBIE™ – NYLON POLISHING PADS

The only hard water removal polishing pads designed for sensitive surfaces.

DESCRIPTION: Pro Scrubbie™ 2 – Nylon Liquid Polishing Pad

Designed to work with Mr Hard Water™ 2 Liquid Glass Polish, the Pro Scrubbie™ 2 – Liquid Polishing Pad is a hook and loop polishing pad optimized for liquid and slurry based polishing compounds. Liquid polishes add much needed lubrication during polishing, are ready to use (no mixing required), and are able to suspend in solution polishing particles much smaller (more than 50X smaller) than abrasive powders, making them safer on sensitive glass surfaces. Each Pro Scurrbie 2 Liquid Polishing Pad contains an absorptive insert sandwiched between multiple layers of durable nylon webbing to better hold and distribute liquid polishes. This increases coverage rates and reduces overspray, making the Pro Scrubbie™ ideal for “full pane” glass polishing.

BENEFITS:

- Ideal for liquid polishes, compounds, and slurries.
- Reduces over spray.
- Increases coverage rates.
- Ideal for “full pane” glass polishing.
- Contains an absorptive foam insert sandwiched between durable nylon webbing.
- Does not contain felt or backing material. Absorbs less water allowing more for lubrication.
- Safer than steel wool.
- Available in 5” or 7”
- **RECOMMENDED:** Mr Hard Water™ 2 – Liquid Glass Polish

DIRECTIONS:

Test in an inconspicuous place. Use on smooth surfaces only! Spray 2- 3 squirts of Mr Hard Water™ Liquid Glass Polish or other liquid compound onto the pad. Polish at low RPM with reduced pressure to avoid tearing pad. Reapply as needed until desired result is achieved. Remove torn webbing as needed. Rinse pad after use. If more aggressive polishing is required, use a non-scratch powder based polish with Pro Scrubbie or steel wool pads. Avoid coated glass. Test in an inconspicuous place.

COVERAGE RATES:

50-100 Sq ft. NOTE: Coverage rates depend upon degree of damage, desired result, glass condition, and effectiveness of polishing compound, slurry, or powder abrasive.

DESCRIPTION:

Pro Scrubbie™ – Nylon Polishing Pad

Designed specifically for hard water removal, Pro Scrubbie™ Nylon Polishing Pads are hook and loop compatible and constructed with a layered nylon webbing material that is tough on hard water stains yet soft on glass. Unlike woven steel wool pads, Pro Scrubbie™ pads eliminate the need for felt backing materials. These felt backing materials absorb much needed water during polishing and gum up hook and loop backing plates. Without this backing material, Pro Scrubbie™ pads absorb no water into the pad, allowing for more lubrication while polishing. Also, each pad has 50% more workable material than traditional woven pads. Each pad can be used on either side, does not rust, and is easily rinsed for multiple applications.

BENEFITS:

- Hard Water removal polishing pad.
- Made of durable nylon webbing.
- Does not contain felt or backing material. Absorbs less water allowing more for lubrication.
- Safer than steel wool.
- Available in 5" or 7"

DIRECTIONS:

Test in an inconspicuous place. Use on smooth surfaces only! Add a small amount of water to the pad. Do not saturate otherwise overspray will occur. Apply polishing compound onto pad and surface. Polish at low RPM with reduced pressure to avoid tearing pad and creating overspray. Reapply as needed until desired result is achieved. Remove torn webbing as needed. Rinse pad after use. If more aggressive polishing is required, use steel wool pads. Always avoid coated glass. Test in an inconspicuous place.

COVERAGE RATES:

50-100 Sq ft. NOTE: Coverage rates depend upon degree of damage, desired result, glass condition, and effectiveness of polishing compound, slurry, or powder abrasive.
